

Software Developer, Full Stack, Typescript (m/w/d)

We urgently need to reduce the CO2 emissions in the real estate sector. However, what is not measured cannot be targeted with precision: Our real-time consumption and production data enables the effective utilization of electricity, gas, heat, and water in everyday life.

We are currently seeking an addition to our software development team to support us in building our multi utility metering platform.

Responsibilities

- Grow our platforms capabilities with new features while also helping us to maintain and improve what is already there.
- Transition seamlessly between working on SPA based frontends and the backend.
- Assist in the integration of adjacent SaaS systems, such as ERP and site survey tools, aiming to further automate the complete end-to-end process – from planning meter installations to providing collected data to customers and the energy market.
- Be involved in shaping our architecture and infrastructure, with a focus on battle-tested and modern technologies, while resisting the urge to pursue the newest hype in tech.
- Participate in developing best practices and guidelines that work for the entire team.

Profile

- You have 3+ years of professional experience developing for the web.
- You bring substantial experience building REST-like APIs and SPAs and are comfortable with the Typescript/Javascript ecosystem, both in the back and front end (Vue would be useful).
- You are comfortable designing and working with relational data models (PostgreSQL).
- You tackle challenges with healthy pragmatism and can distinguish between bike-shedding and the important decisions that have impact in the long run.
- You design and write code with a focus on maintainability and scalability, and avoid complexity where possible.
- You are comfortable with Linux, working in a terminal and know how to use git.
- Bonus points: You worked with time-series/IoT-data platforms before and gathered experience in the German energy market.
- Fluency in written and spoken English is required, German skills desirable.

What we offer:

- A small team of motivated people hungry to build something with real impact.
- Competitive salary with the opportunity to participate in our VSOP program.
- Regular feedback sessions and a culture of openness towards your input.
- You can work mostly remote with occasional office days in either Berlin or Heidelberg.
- Most of us are parents – we understand that kids require flexibility.
- 30 days of vacation per year and an optional company pension plan.
- Deutschlandticket or job bike program.

We look forward to your application via: recruiting@metiundo.io
